CAREER OBJECTIVE

Be a subsidiary with a prestigious institution. Make strides the standard of calling and enabling them with fundamental abilities, qualities, information, state of mind and value of time and to seek after a challenging career and be portion of a dynamic organization that gives scope to upgrade my information, abilities and to reach the pinnacle within the computing and inquire about field with sheer assurance, dedication and difficult work.

EDUCATION

2020-2024

SOFTWARE ENGINEERING, JINNAH UNIVERSITY FOR WOMEN

CGPA: 3.21

Completed Bachelor of Software Engineering (BSSE).

MAY 2019

INTERMEDIATE (PRE-ENGINEERING), GOVT COLLAGE FOR WOMEN, NAZIMABAD

Intermediate in Science (Pre-Engineering) from Govt College for Women, Nazimabad in 2019.

APRIL 2017

MATRIC (SCIENCE), SM HAFIZ UR REHMAN

MATRIC IN SCIENCE FROM S.M HAFIZ UR REHMAN IN 2017.

INTERNSHIPS

YEAR – 2023

WEB DEVELOPER (WORDPRESS), SMHCODERS

6-month Remote Internship in Web Development from SMHcoders.

YEAR – 2021

GRAPHIC DESIGNER , CAREER ADVISER

2- Months Remote Internship in Graphic Designing from Career Adviser.

EXPERIENCE

May 28, 2024 – May 28, 2026

Software Developer (Remote), SMHCODERS

- Develop and maintain website-based software applications using WordPress, Python, HTML, CSS, Javascript, PHP, and MySQL.
- Design intuitive and visually appealing user interfaces for web applications.
- Collaborate with the Digital Solutions Development (DSD) team to deliver innovative digital solutions and exceptional user experiences.
- Ensure responsive design implementation across multiple devices for a seamless user experience.

PROJECTS

2025

Virtual Flow Meter Dashboard

(Python, PyQt (Qt Designer), AI, Oil & Gas)

- Developed a desktop dashboard for monitoring and visualizing virtual flow meter data for an oil & gas application.
- Converted a manual workflow into an AI-assisted system, improving automation and reducing manual intervention.
- Designed an interactive UI using Qt Designer and implemented the application in Python.
- Built data visualization and monitoring features for engineering analysis.

2024–2025

Employee Management System (EMS)

(React.js, PHP, MySQL)

- Developed a full-stack Employee Management System with separate portals for Admin, Employees, and Clients.
- Built a **Client Portal** to track project progress and communicate with the team manager.
- Developed an **Employee Portal** for attendance, HR information, and employee management.
- Created an **Admin Portal** to manage employees, projects, attendance, and overall system operations.
- Implemented role-based authentication and access control for different user types.

2024

Eco Nourish

Food Waste Reduction App

Developed a mobile application designed to reduce food waste through smart tracking and management of food items.

Key Features:

- Food Identification: Utilized image recognition technology to identify various types of food items by capturing images.
- Expiration Date Tracking: Enabled users to track the expiration dates of food products to avoid wastage.
- Leftover Recipe Suggestions: Provided recipes based on available leftovers to encourage better use of food items.
- Barcode Scanning: Incorporated barcode scanning functionality to simplify the addition of food items into the app's tracking system.

2023

SMHcoders Website

(WordPress | Elementor | PHP | MySQL | phpMyAdmin)

- Developed the complete **SMHCODERS** company website using **WordPress** and **Elementor**.
- Built and customized responsive pages with the help of Elementor and various WordPress plugins.
- Configured and managed the **MySQL** database for backend operations.
- Implemented both **frontend** and **backend** functionality, ensuring smooth website performance.
- Optimized the website for responsiveness, usability, and easy content management.
- Deployed a fully functional business website for the company's online presence.

2023

DR REMOTE (FYP)

(PHP | MySQL | Java | Android Studio | IoT)

- Developed a healthcare monitoring system with a dynamic website and Android application.
- Built a web portal using **PHP** and **MySQL** to manage doctors, hospitals, and departments.
- Designed an Android application in **Java** for patient registration, login, and appointment booking.
- Implemented real-time **call and chat** functionality for remote doctor consultations.
- Integrated an **IoT device** to monitor patient vitals, including blood pressure and oxygen saturation.
- Stored and synchronized patient health data securely in a **MySQL** database for continuous monitoring.
- Created a centralized platform to improve accessibility, remote healthcare services, and patient management.

DISASTER MANAGEMENT SYSTEM

(Android | Java | SQLite)

- Developed an Android application to provide disaster awareness and emergency assistance.
- Enabled users to view disaster information and access nearby emergency shelters and safety camps.
- Designed a simple and user-friendly interface for quick access during emergency situations.
- Improved accessibility to critical safety information during natural disasters.

IOT BASED AUTOMATIC

(IoT | Embedded Systems | Humidity Sensor)

- Developed an IoT-based automatic humidifier that monitors environmental humidity levels in real time.
- Integrated a humidity sensor to automatically activate the humidifier when humidity falls below a predefined threshold.
- Automated humidity control to maintain optimal indoor environmental conditions.
- Reduced manual intervention through sensor-based intelligent automation.

2022

POSTFIX EVALUATOR

(Java | Data Structures | Java Swing (GUI))

- Developed a desktop application to evaluate postfix (Reverse Polish Notation) expressions using stack-based data structures.
- Implemented an intuitive GUI using Java Swing for user-friendly expression input and result display.
- Designed and implemented the postfix evaluation algorithm for accurate mathematical computation.
- Created detailed algorithm documentation and flowcharts to illustrate the application's logic and execution flow.

TIC TAC TOE

(C++ | Operating Systems | VMware)

- Developed a Tic Tac Toe game as part of an Operating Systems course using a VMware environment.
- Implemented single-player gameplay with a computer-generated opponent.
- Designed game logic to handle player moves, win/loss detection, and draw conditions.
- Added file handling functionality to save game results for future reference and record keeping.

2021

JUB DIGITAL WEBSITE

(HTML | CSS | JavaScript | PHP | MySQL)

- Developed a dynamic business website as part of a Web Engineering project using HTML, CSS, JavaScript, PHP, and MySQL.
- Built responsive web pages to showcase the company's services, gallery, vision, and mission.
- Implemented a contact form and order inquiry system for customer communication and lead generation.
- Designed and integrated a MySQL database for efficient data management and dynamic content.
- Created a user-friendly interface to help businesses promote their brand and connect with potential customers.

SKILLS

- React.js
- JavaScript
- HTML5
- CSS3
- PHP
- Python
- Java
- Kotlin
- Qt Designer
- Git & GitHub
- VS Code
- VMware
- Responsive Web Design
- UI/UX Design
- Graphic Design
- Quality Assurance
- Digital Marketing
- Documentation
- Report Writing
- C#
- SQL
- MySQL
- WordPress
- Elementor
- REST APIs
- phpMyAdmin
- Android Studio
- Mobile App Development
- Web Development
- Software Development
- Object-Oriented Programming (OOP)
- AI & Machine Learning
- Communication Skills
- Presentation Skills
- Problem Solving
- Team Collaboration
- Time Management
- Quick Learner

CERTIFICATES

- Remote Work Professional Certification (RWPC™) – CertiProf
- Scrum Foundation Professional Certification (SFPC™) – CertiProf
- Agile Project Management Certification – Coursera
- QA Fundamentals – Pearl University
- Graphic Designing Certification – Coursera
- Graphic Designing Certification – Career Advisor
